

ALEXANDRA DE GENDRE

November 2021

CONTACT INFORMATION

School of Economics,
The University of Sydney
Sydney NSW 2006,
Australia

E-mail: alexandra.degendre@sydney.edu.au
Website: adegendre.com

Citizenship: France, United States, Australian Permanent Resident

Languages: French (native), English (fluent), German (fluent), Spanish (fluent), Russian (beginner)

RESEARCH FIELDS

Primary field: Economics of Education, Applied Econometrics

Secondary field: Labor Economics, Family Economics, Health Economics

EDUCATION

2015-2021	PhD in Economics. Maastricht University, the Netherlands Dissertation: <i>Behavioral Barriers to Success in Education</i> Advisor: Olivier Marie, Erasmus University, Rotterdam Committee: Didier Fouarge, Deborah Cobb-Clark, Hessel Oosterbeek, Dinand Webbink, Inge de Wolf
2013-2014	M.Sc. Economics. Humboldt University Berlin, Germany
2011-2014	M.Sc. Statistics. ENSAI (<i>Grande Ecole</i> , National School For Statistics and Information Analysis), France
2008-2011	<i>Classe Préparatoire aux Grandes Ecoles, B/L Lettres et Sciences Sociales</i> . Sainte-Marie de Neuilly, France B.A. (equivalent) in Economics and in History from University Paris X, France

CURRENT POSITION & AFFILIATIONS

Since 09/2019	doctoral/postdoctoral Research Associate, The University of Sydney, Australia
Since 09/2018	Research Affiliate, IZA Institute of Labor Economics
Since 09/2018	Research Affiliate, Australian Research Council Centre of Excellence for Children and Families over the Life Course

RESEARCH

Class Rank and Sibling Spillover Effects (Job Market Paper)

Abstract: Household responses to changes in school inputs can change drastically the returns to public investment. I study an important and understudied aspect of family decision-making: how parents and younger siblings adjust their behaviors in response to the relative academic achievement of an older sibling within her cohort. I propose a novel identification strategy for sibling spillover effects in school achievement which exploits variation in child rank in school. I use administrative records from the Netherlands, where pupils leave primary school with a national standardized test score and a tracking recommendation. Variation in class rank conditional on ability and cohort-by-school fixed effects is credibly exogenous in this setting, and isolates sibling spillovers driven by behavioral and psychological mechanisms, net of direct transmission of human capital. A 1 standard deviation (SD) increase in child rank decreases their younger sibling's test scores by around 2%SD. Higher-ranked older sibling experience faster own human capital accumulation, and same-sex older siblings have a stronger influence on younger siblings. I further show that migrant parents increase investments in school quality and speaking Dutch at home. Older sibling ranks also depress teachers' tracking advice particularly for migrant children, suggesting that teachers' form harsher expectations about younger siblings. My findings indicate that behavioral and psychological mechanisms contribute to sibling spillover effects, and school inputs are important drivers of within- family human capital spillovers.

Submitted and Under Review

[On the Mechanisms of Ability Peer Effect](#), with Nicolas Salamanca.

Abstract: Studying with higher ability peers increases student performance, yet we have little idea why. We exploit mandated random assignment of students to classrooms and find positive peer effects on test scores. With rich data on nineteen potential mechanisms, we then estimate how effects on attitudes, parents, and teachers could drive these results. Higher-achieving peers reduce student effort, increase student university aspirations, increase parental time investments and parental strictness, and have precise null effects elsewhere. None of these mechanisms, however, explain our peer effect on test scores. Our novel method to detect cluster violations of random assignment is of independent interest.

[Child Health and Parental Responses to an Unconditional Cash Transfer at Birth](#), with John Lynch, Aurelie Meunier, Rhiannon Pilkington, and Stefanie Schurer.

Abstract: We estimate the impact on child health of the unanticipated introduction of the Australian Baby Bonus, a \$3,000 one-off unconditional cash transfer at birth. Using regression discontinuity methods and linked administrative data from South Australia, we find that treated babies had fewer preventable, acute, and urgent hospital presentations—medical care available without co-payments—in the first two years of life. The payment later increased demand for elective care, which requires planning, medical referrals, and often co-payments. Our effects are strongest for disadvantaged families. Our findings suggest that up to 34% of the payout were recouped within the first year.

[From Subsidies to Loans: The Effects of a National Student Finance Reform on the Choices of Secondary School Students](#), with Jan Kabatek.

Abstract: We analyse the effects of a national reform of higher education financing on the decision making of secondary school students in the Netherlands. The reform eliminated a universal subsidy for higher education students and replaced it by a low-interest loan, causing a substantive increase in the private costs of higher education. We show that the reform had a large impact on students' decision making, decreasing the share of secondary school students following college-preparing tracks by 6.8 percentage points. The reform also affected students' subject specialization choices, and the living arrangements of new college entrants. We show that secondary school students respond to the costs of higher education well ahead of their graduation, which has important consequences for the design of empirical studies of higher education

financing. It also shows that policy uncertainty regarding financial aid is sufficient to deter many students from pursuing higher education.

Two decades of welfare reforms in Australia: How did they affect single mothers and their children?, with Stefanie Schurer and Angela Zhang.

Abstract: Worldwide, single mothers are profoundly time and income constrained, making them heavily reliant on government transfers. We examine how welfare reforms that introduced mutual obligations affected the economic position of single mothers and the development of their children over the past two decades in Australia. Using nationally representative longitudinal data, we show that disposable incomes of single-mother households were significantly reduced relative to partnered mothers since the 2005 Welfare-to-Work Act came into effect in July 2006, a downward trend that was aggravated by the Global Financial Crisis and the 2013 suspension of grandfathered single parenting payment rules. The reform diminished parenting and family payments for single mothers, who compensated income loss by increasing reliance on disability pension payments, work hours, and child-care expenditures. We then use nationally representative cohort data to estimate the impact of single motherhood on child skill development, following children who entered primary school when their mothers were affected by the Welfare-to-Work reform. We find unadjusted single-motherhood gaps of 0.2 SD in cognitive and 0.3 SD in non-cognitive skills. Non-cognitive skill gaps are only partially explained by differences in observable characteristics, while cognitive skill gaps are fully explained by observable characteristics. Differences in disposable household income between single and partnered mother households explain over 50% of the observed cognitive ability gaps in childhood and 25% in late adolescence. In the presence of positive spillover effects, we propose that welfare payments to vulnerable families may function as a social investment rather than a sunk cost.

Research in Progress

A Meta-Analysis on Role Models in Education, with Jan Feld, Ulf Zölitz and Nicolas Salamanca.

The Impact of Low-Income Priority Points on School Choice and Student Outcomes, with Shushanik Margaryan and José Montalban Castilla.

AWARDS AND FUNDING

2020	Chief Investigator, “ <i>Building Resilience: Communities, Schools and Parental Investment</i> ”. Life Course Centre Research Funding (5,000 dollars AUD)
2018	ODISSEI Microdata Access Discount for Statistics Netherlands project “ <i>Student Finance and Educational Choice</i> ”.
2018	Chief Investigator, “ <i>Student Finance and Educational Choice</i> ”. Research Centre for Education and the Labor Market, Maastricht University (5,000 euros)
2018	Outstanding Tutor Award, School of Business and Economics, Maastricht University
2018	Travel Grant, Graduate School of Business and Economics, Maastricht University (3,000 euros)
2017	Chief Investigator, “ <i>A Real-Effort Task Experiment On Goal-Setting and Effort Provision Under Uncertainty</i> ”. Research Centre for Education and the Labor Market, Maastricht University (5,000 euros)
2015	PhD Scholarship, Graduate School of Business and Economics, Maastricht University

CONFERENCE & INVITED SEMINAR PRESENTATIONS

TEACHING EXPERIENCE

- 2020 Honours/Master co-supervision (University of Sydney)
Assisted Prof. Stefanie Schurer's supervision duties
- 2015, 2016 Tutor in Behavioral Economics - Maastricht University
Graduate course
Teaching assistant for Thomas Dohmen.
Teaching evaluation: 8.8/10 (N=21).
- 2015-2017 Tutor in Personnel Economics - Maastricht University
Undergraduate course
Teaching assistant for Steffen Kuenn.
Teaching evaluation: 9.3/10 (N=70).
- 2015 Tutor in Presentation Skills - Maastricht University
Undergraduate course
Teaching evaluation: 8.7/10
